Få kontakt med PiiGAB M-Bus 900S

- 1) Connect to the PiiGAB M-Bus 810 to the network connection and the power supply.
- 2) Wait to the Pwr-LED to become constant red.
- 3) Read the gateway's MAC-address at the right gable. The MAC-address has the format: 00-80-A3-XX-XX-XX.
- 4) Start the application PiiGAB M-Bus Setup Wizard.
- 5) For initial contact there are three different possibilities:
 - a. DHCP with router: Computer and gateway will be assigned with an IP-configuration automatically.
 - b. Static network: Assigning the gateway to a specific address in the Wizard.
 1. Turn on the gateway.
 2. Start the PiiGAB Wizard and from the main menu select Change gateway's IP-settings.
 3. Specify the gateway's MAC-address and press Next.
 4. Specify the IP-address, press Next and press Apply. Note: The network mask will automatically be set to 255.255.255.0.
 5. The gateway will restart.
- 6) Select Find gateways on the network from the main menu in the Wizard.
- 7) Double click on the PiiGAB M-Bus 810 in the list and start its web interface.

Testa kommunikation med en M-Bus mätare

- 1) Start the PiiGAB M-Bus Setup Wizard and choose Test search and configure meters, press Next.
- 2) Specify the gateway's IP-address, port 10001 and UDP, press Next.
- 3) Select Find meter's primary and secondary address.
- 4) Specify primary address 254 and press Find. The M-Bus meter should respond. Read the meter's actual primary address. Note: You can only have one M-Bus meter connected when using primary address 254.
- 5) Specify primary address actual primary address and press Find. The M-Bus meter should respond.
